ATAGO®

Uses

Orchard

Customs inspection/import

Market

Grocery store

Besides aforementioned, pâtissier chefs who uses fruits as an ingredient,
gardening hobbyist that enjoys home gardening and may more can use it.

2 ways to measure

Just touch the fruit and press the side button

Place a fruit, then just press the START button

Touch the surface of fruit

Without cutting or squeezing fruits, Brix (sugar concentration) can be measured in one second just by placing fruits on the sample stage. There is no more wiping or washing after each measurement. A buzzer sounds and vibrates when it is done taking a measurement. (ON/OFF setting)

Total inspection is possible.

All it takes is to put it against a fruit so each individual fruits' Brix (sugar level) can be inspected. The measured fruits are intact and can then be shipped and sold after measurement.

Super lightweight that fits in your pocket

PAL-HIKARI is the world most compact nondestructive Brix meter. The button located on the lateral side of the unit makes it possible to take measurements with one hand while the fruits that are on the tree. The unit is battery powered which makes it possible to take measurements anywhere.

Fits well on the surface of a fruit

PAL-HIKARI fits well to fruit surfaces. External light or how fruits are placed will not cause measurement discrepancies because PAL-HIKARI has a good contact with fruit surfaces regardless its shape.

Series total 540,000 unit

*PAL series

ATAGO is an established manufacture of Brix meters since 1940. For Brix (sugar level), with ATAGO's proven track of history in technology, PAL-HIKARI is developed on basis of this accomplished technology.

ATAGO products are used in 154 countries worldwide.

NEW NFC Function

With an NFC (Near Field Communication) function, measurements history can be accessed by simply touching a contactless IC card reader/writer connected to your smartphone or computer.

NEW ELI (External Light Interference)Function

PAL-HIKARI is equipped with ELI (External Light Interference) function that will detect when external light enters the instrument making measurement taking possible outdoors, while the fruits are growing on the tree. When the light is detected, the instrument will display 'nnn'.

PAL-HIKARI's principal measurement method

Correlation between PAL-HIKARI and Brix (sugar level)

*The graph is based on the apple scale

Offset feature

This function allows to adjust fixed numeric value to the measurement value. Please use the offset feature to match the measurement value with already owned Brix meter.

NEW Shading Cover S
Newly Shading Cover S is convenient when measuring outdoors.

User Testimonials

Even grapes still on the vine are easy to measure

An acquaintance told me about PAL-HIKARI. We are using it to check whether the grapes are ready to ship and the quality when we try growing new varieties. I like how small and lightweight the PAL-HIKARI is, which makes it easy to measure grapes that are still on the vine. I'm also pleased with how reasonably priced the PAL-HIKARI is compared to devices made by other manufacturers.

Story

Sweet and Delicious Fruit Tomatoes

There are various types of tomatoes. More recently, sweet and juicy fruit tomatoes are gaining popularity. Fruit tomatoes, as the name suggests, have a sugar content that is comparable to fruits.

The sugar concentration (Brix) of a general tomato is about four to five, whereas the sugar concentration (Brix) of fruit tomatoes is 8 or more.

Among them, salt tomatoes from Kumamoto Prefecture that are often given as a high-quality gift, fruit tomatoes from Tokutani, Kochi Prefecture, which is said to be the birthplace of fruit tomatoes, and Amera tomatoes from Shizuoka Prefecture are popular. The difference from ordinary tomatoes lies in the way they are grown. By adjusting the amount of watering and increasing the soil salinity, increases the sugar concentration (Brix).

Story

1,200,000 yen apple ?!

The focus of attention, "Esashi Apple" is the top brand selected by JA (Japan Agricultural Co-operatives) Esashi from among apples grown in unique environment of Esashi region of Okushu city in Iwate prefecture in characteristic regional soil, climate, dwarfing technique, and keeping them unbagged.

After selective selection process, only those with the right color, size, and sugar level are allowed to be called "Esashi Apple". From the entire harvest, only 1% is selected as the special of the top grade.

In recent years, the auctioned price of the special selection grade was sold during auctioned for 1,200,000 yen. The cost of an apple was 43,000 yen.

Esashi apple is proudly locally made over 40 years. Following the example of Esashi apple, many unique savory brands are beginning to appear Japan.

The most expensive variety apple brand was "Sun Fuji."

Story

"Fuji" and "Sun Fuji" ?

Originating in Fujisaki machi, a town located in Aomori prefecture, "Fuji apple" is grown worldwide with highest global production in the world. "Sun Fuji" and "Fuji" are thought as a different variety from each other but is both "Fuji apple."

Matured "Fuji" is enclosed in brown paper bags to keep insect pests from getting to them before harvesting. Its distinctive characteristics are thin skin and vibrant color.

On the other hand, "Sun Fuji" is not bagged and is exposed to sunlight for a long duration of time. The color may not be quite as good but its sugar level is very high.

"Sun Fuji" branching from "Fuji" was branded to have sweet flavor while "Fuji" was branded for its pretty reddish color. From this branding, one variety of apple made it possible to satisfy different market needs such as "good color and storability" and "naturally distinct sweetness."

Story

Guinness World Records World's Sweetest Peach

Well known producers of the peaches are located in Yamanashi, Fukushima, Nagano prefectures in Japan. "World's highest Brix peach" recorded in Guinness World Records can be found in Kishiwada city, Osaka prefecture. During the Guinness World Records challenge, the average peaches measured 22.2 Brix for "Masahime" produced by Maruya Farm in Kishiwadashi Kanechikachou.

General Brix level of peaches are about 10 to 12, so its surprising sweetness is nearly double the regular peaches. Kanechikachou has always been a famous place of peaches since ancient times but its nationwide awareness is low. It gained media publicity as a result of this Guinness World Records registration.

The challenge to Guinness World Records was a long hard work that lasted three years, but by the effort of President Takahiro Matsumoto of "Maruya Farm", "Kanechika's peach" was able to push its brand power.

Peach of "Maruya Farm" is also selling on the internet, but is a very popular item that "sold out" in 15 minutes from the start of reservation.

Story

Already available during Yayoi period

Amongst all the fruits grown in Japan, Asian pears have a long history with a recorded history of its consumption during the Yayoi period (300BC-300AD). Asian pears are one of the fruits popular in Japan since long ago, such poem in which "pears" have been included among the oldest existing collection of Japanese poetry, "Manyoushu." It features a distinctive texture, with sweetness and juiciness. There are many varieties and with more than 150 kinds of varieties the sweet variety are known as Shintakanashi. Its Brix measures about 12 but because it is not very tart, the sweetness tastes even stronger.

Shintakanashi is also called "Jumbo Nashi" (jumbo pear) each weighing 600g to 1kg. Larger ones can even weigh about 1.5kg. Compared to the other Asian pears, this is almost 2 to 3 times larger than the regular Asian pears. Its large size and appearance, it is a popular variety for gifts. Popularity as a gift is not limited to Japan alone, there is a demand for gifts in Mid-Autumn Festival in Taiwan, and it is one of the brand pears exported overseas. The fact it is not as tart as other pears, and its good appearance wins popularity among other domestic pears.

User Testimonials

Managing the condition of Strawberry

Strawberry farmer Sonoe Mori, moved to Hokkaido when her husband was transferred due to work. Since she had an interest in agriculture, she took advantage of the city's farming support system and started growing strawberries. She had seen Atago's refractometer when she had her training as a farmer, and when she saw the PAL-HIKARI non-destructive brix meter for strawberry in the advertisement on the Internet, she immediately purchased it."She has trouble with starwberries having ""white shoulder"" which causes the color not to be as red.

Not only cheking the sweetness of the strawberry, but she is daily checking if the plants itself is having no problems.

To make a specific brand in strawberry, not only how the instrument looks, she is highly supporting our PAL-HIKARI that can measure brix% without needing to cut fruits. In addition, she also praising our brix/acidty meter which can measure the sweetness and sourness with one device."

Story

The very first Blueberry in Japan

"Blueberries came to Japan in 1952 when Ministry of Agriculture, Forestry and Fisheries brought Northern High Bush blueberries from USA." "Rabbiteye Blueberry which is adaptable to warm area came to Japan in 1962, and started cultivating in 1968 by Mr. Hayao Shimamura who lives in Kodaira city."

"This became the start of economic cultivation and the first blueberry farm "Shimamura Blueberry Farm" was established." "Highbush Blueberries came to Japan in 1971, and started to produce in Gunma, Niigata, Yamanashi, and Miyagi which is a cool area and suitable for cultivation." Nowadays, not only fruits but also jams and cakes are starting to appear in stores, and it is gaining recognition as a functional food.

Which would you choose, gold or green?

There are two types of kiwi: green kiwi, which is green, and gold kiwi, which is yellow. *Green kiwi has a 15% brix, while gold kiwi has 18% brix.

Gold kiwi is characterized by its sweetness. *Gold kiwi is developed to suit Japanese taste for sweetness and is said to have beauty effects such as brightening and for beautiful skin due to its high vitamin C and E. Meanwhile, green kiwi is popular for its refreshing taste with a good balance of sweetness and sourness. Not only that, but it is also popular because it contains twice as much dietary fiber as gold kiwi, it provides nutrients that modern people tend to lack.

User Testimonials

Mangoes with a stable sweetness, not a "certain amount of sweetness"

We sort and grading, box, and ship the fruit ourselves.Up until now, I have eaten a lot of mangoes during sorting and grading. The first thing we do is to try the mango when the color is a little different, the shape is a little different, and when the texture is different. By trying a lot of mango there are times when we do not have to have a meal because we are full with eating a lot of mango. But thanks to this experience, I know how sweet the mango can be. However, I do know that this is a way of estimating the certain level of sweetness. By using the HIKARI series, not a certain level of sweetness, but a stable sweetness of mango can always be provided to customers.

Story

What prunes are you eating?

Prune refers to Western plum. Unlike Japanese plum, it is not as sour. Other than eating it fresh, Prune tends to be sold as dried fruits or jam. "In stores, it is not specified what kind of prunes it is, but there are different kinds of prunes in the market."

One of the famous prunes in Japan is "Sun prune" which are small and very sweet. The sweetness is about 18° brix with a well balanced of sourness which brings out the sweetness. "There is a prune in Japan ""sugar"" which existed from the ancient times, and had a 14-15° brix.

It is popular for its well balanced sweetness and sourness."

There are many other types of prunes in the market. Why not try finding the one you like?

User Testimonials

Measurements can be taken without damaging the melon.

There has been expectations for non-destructive brix meters. The biggest advantage is that brix% can be measured without cutting the fruits."For melon, there is a strict condition that the brix should be higher than 14%. Due to the strict condition, the sweetness of melon has to be checked."Until now, melon with a slow growth are being chosen to cut and check the sweetness."A non-destructive brix meter is useful due it measures the sweetness while no cutting required in the melon."

Story

Adding salt makes the watermelon sweeter?!

"Many people have probably tried the idea of "adding salt to watermelon makes it sweeter." "Adding salt to watermelon makes it sweeter is not because the ingredients have changed, but because it make the watermelon taste sweeter.

This phenomenon tends to occur when one taste is strong while the other taste is weak. For watermelon, "simultaneous contrast" occurs by tasting the sweet and salt at the same time.

The balance between watermelon and salt is important for simultaneous contrast, so the more salt you add, does not mean that the watermelon will taste sweeter.

Be careful not to use too much salt.

PAL-HIKARI 32 Cat.No.5482

Measurement fruit	Watermelon(Recommended sample size is 20 to 25cm in diameter.)	Automatic Temperature Control Range	10.0 to 40.0°C *Acclimate watermelon to ambient temperature
Measurement Range	Brix 5.0 to 18.0%	Ambient Temperature	10 to 40°C
Resolution	Brix 0.1%	International Protection Class	IP64
Measurement Accuracy	Brix ±2.0% *Watermelon varieties and measurement environment may affect accuracy.	Power Supply	2 x AAA alkaline batteries
Repeatability	Brix ±1%	Dimensions and Weight	6.1(M) x 4.4(D) x 11.5(H)cm, 120g (Main Unit only)

The sensor fits perfectly on the outer surface of fruits.

Story

Small watermelon contains 1.5 times more lycopene than tomato.

Watermelon is known for its refreshing sweetness and is eaten in the summer. Small watermelon contains 1.5 times more lycopene than tomato.

Lycopene has a strong antioxidant effect, improves blood flow, and promotes skin turnover, so it is said to improve lifestyle-related diseases and beautify the skin.

Watermelon not only reminds you the seasonal feeling, but it also contains a lot of nutrients to help you survive the hot summer.

Story

Light the pot and go pick it.

The average sweetness of corn has been rising over the past few years as sweeter varieties of corns are developed one after another, and it is not rare for a corn to have over 16-17% brix. There are corn which is over 20% brix and is higher than fruits.

There is a saying, "Light the pot and go harvest it." Corn has the highest brix% when freshly harvested, and the sugar content decreases as time passes. Also, by heating it without peeling it, the sweetness is concentrated and it does not become watery. With this simple twist, you can enjoy even more delicious corn.

Story

Nostalgic taste first tomato

"There are large tomato which weighs more than 100g, and one of the famous tomato are ""Momotaro"" and ""Rinka409"". ""Recently, cherry tomatoes are increasing its popularity due to it can be eaten without cutting, and has exceeded the market value than large tomatoes." "However, recently, the popularity of "First Tomato," a large tomato that was widely distributed before Momotaro was developed, has been reviving.

"The brix% of a regular tomato are 4-6% brix, while it is 8-9% brix which higher and has a balanced flavor of sweetness and slight sourness." "Because there is little jelly-like part and the pulp is firm, it is perfect not only for eating is fresh, but also for sandwich.

Brix-Acidity Meter

PAL-BX|ACID series

Sweet and Sour ~ Balance is the Key ~

Sweetness of fruit is often used for evaluating quality. Unfortunately, sweetness does not always mean that the fruit is tasty. Delicious fruits have the proper proportion of tartness and sweetness. Brix-Acid ratio indicates the maturation levels of fruits. Brix-Acid ratio is displayed by pressing a single button (R button). No need for complicated and troublesome calculations.

Common Specifications

Measurement accuracy	Brix ^{*1}	±2.0%	Automatic temperature compensation range	Brix	10.0 to 100.0°C
	Acid ^{*1}	±0.10% (Acid 0.10 to 1.00%) Relative precision ±10% (Acid 1.01% or more)		Acid	10.0 to 40.0°C
Resolution	Brix ^{*1}	0.1%	Power supply	2×AAA alkaline batteries	
	Acid	0.01%	International protection class	IP65 Water resistant	
	Sugar/Acid ratio ^{*1}	0.00 (0.00 to 9.99) 00.00 (10.00 to 99.99) 000.0 (100 or more)	Dimensions and weight	5.5×3.1×10.9cm, 100g (main unit only)

pH Meter

PAL-pH

Drop and don't break. Feel safe and reliable.

In conventional pH meters the glass electrode has a protrusion-like shape and is easily broken requiring delicate handling. The PAL-pH succeeded in developing a durable glass electrode that can withstand large loads. In various fields as well as food production sites, the risk of contamination and injuries can be reduced and used daily without hesitation.

Also, the electrode does not require a storage solution.

PAL-pH Specifications

Measurement range	pH	0.00 ~ 14.00%	Sample volume	At least 0.6mL

<p>Q Does fruit need to be prepared?</p> <p>A No need to cut, strain, or squeeze fruit.</p>	<p>Q Does skin color affect measurement? (Red and green apple)</p> <p>A Color does not affect.</p>
<p>Q What to look out for when storing.</p> <p>A Make sure to dry the cushion well. Take out batteries when planning to not to use for a long duration of time.</p>	<p>Q Battery life?</p> <p>A About 1,100 times (AAA alkaline batteries x 2).</p>
<p>Q Can measurement be taken for fruits during its growth?</p> <p>A Measurement can be taken while the fruit is on the tree. Carefully place the cushion on the fruit not to let it fall off the branch.</p>	<p>Q Measuring the same fruit, the value is different.</p> <p>A Brix level of fruit differs depending on such factor as exposure to sunlight and area of the fruit. This unit measures the area where the sample stage is placed against. *Please reference "When measurement value does not seem to be correct..."</p>
<p>Q What fruit can be measured?</p> <p>A PAL-HIKARi is a fruit specific instrument with model for each fruit.</p>	<p>Q How do you calibrate?</p> <p>A PAL-HIKARi is designed to require no calibration. (Equipped with offset feature. Please reference pg.3.)</p>
<p>Q I would like to measure the sugar content of processed products such as jams.</p> <p>A Packaged sets products are available that comes with pocket Brix meter (PAL-0) and pocket Brix-acidity meter.</p>	

When measurement value does not seem to be correct...

POINT External light interference

Avoid light from entering the sample stage. Light entering the sample stage will cause measurement error and cause greater margin of error.

POINT Effect of contact between the sample stage and fruit

Properly place the sample stage of PAL-HIKARi against a fruit. Improper contact will allow external light to enter.

POINT Effect of fruit temperature

Be sure to take measurement after allowing the sample fruit to acclimate to PAL-HIKARi.
*Place them under same condition for a period of time.

POINT Effect of water droplet, soiled area, and condition of the fruit

Avoid fruit's surface with water droplets or soiled area. Correct measurements cannot be achieved for soft and spotty fruits caused by elapsed time since harvesting.

NO MEASURE™ NO SafeLIFE

Bringing measurement devices that provides safety and peace of mind in various industries.

[Organized Beauty] GOOD DESIGN

2S Arrangement

Meetings are held to promptly decide on troublesome, useless, and inefficient things.

2S Tidiness
